Sequence logo showing nucleotide conservation across the MA0657.1.KLF13 binding site. The x-axis represents the position relative to the binding site (from -100 to 99). The y-axis represents the information content (from 0.09 to 1.5). The sequence is color-coded by nucleotide: A (green), C (blue), G (orange), and T (red). The binding site is centered around position 0, where the sequence is highly conserved, particularly for G and C. The sequence is flanked by regions of lower conservation, particularly around positions -100 and 99.
