0.1

Sequence logo showing nucleotide conservation across the MA0657.1.KLF13 binding site. The x-axis represents the position relative to the binding site (from -100 to 99). The y-axis represents the information content (from 0.1 to 1.52). The sequence is color-coded by nucleotide: A (green), C (blue), G (orange), and T (red). The sequence is highly conserved, particularly in the region from -100 to 0, where the information content is high. The sequence is highly conserved, particularly in the region from -100 to 0, where the information content is high.
